Week 38

13 – 19 September

Four sessions, seventy-nine of the eighty-four sets you planned. Squat and press both moved up a step. Two groups came in under range – the two you cut when a session runs long.

WHAT TO CHANGE

Hamstrings **MORE**

6 sets against a range of 8 to 14.

Rear delts **MORE**

5 sets. Rowing carryover is not enough.

Lats **KEEP**

19 sets, top of range, e1RM rising.

Side delts **LESS**

16 direct sets plus pressing carryover.

Semantics, applied without exception: accent for actions and for the user's own data (the chart line, the rung fill); gold for records only; red only for destructive actions and for a value that has fallen under its target floor. No third hue anywhere.

Surfaces — separation

Card on bg

Raised element inside it

Light
#FAF9F5 → #EAE7DA → #DCD7C4

Card on bg

Raised element inside it

Dark
#1F1E1C → #2E2D29 → #3A3935

Light surface was #F2F0E8 — 1.08:1 against the ground, which disappears on a cheap panel and under gym lighting. It is now #EAE7DA at 1.18:1, past the dark theme's 1.21:1 in the same direction, with surface-raised stepped to #DCD7C4 so it stays 1.16:1 clear of the card under it. Tone alone still reads thin at low brightness in light mode, so light-mode cards also carry a 1px #D6D1BE border; dark mode does not need one and does not get one.

light bg → surface 1.177 · surface → raised 1.164 · bg → raised 1.369
dark bg → surface 1.208 · surface → raised 1.192 · bg → raised 1.441
ΔL* light 6.3 and 5.6 (it was 3.1) · dark 7.1 and 5.5
dimmed at a quarter backlight with 2 cd/m² of veiling glare, light holds ΔL* 6.2 / 5.5 and dark 4.4 / 4.0 — both above the 2.0 where a large flat step stops being visible

52

56

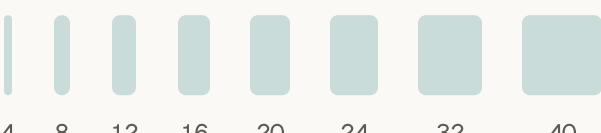

44 list row · 52 exercise detail · 56 session header

The same figure as the body map, cropped to the region the exercise trains and coloured in two flat tones: the body in #B3AC95 (light) / #5A574D (dark), the target muscle in the accent. Eight crops — thigh, hips, lower leg, chest, upper back, lower back, shoulders, arms — each derived from the scanned bounding box of the muscles it has to carry, and each taking the whole head when it reaches the upper body, because a crop through the skull reads as a blob. The view is picked per exercise by the side that shows the target. Every muscle is its own region over a separate silhouette layer, and each lit region is seamed in the body tone so neighbouring lit muscles stay separate masses — a level band across both legs reads as shorts. Tile: surface-raised, radius 12 (16 above 56px). Used in Library → Exercises, the session header and the Progress exercise detail header. Full set on the Exercise icons board.

How this differs from the Claude app

Rungs borrows the Claude interface's *posture* — a warm off-white ground rather than pure white, near-black text rather than #000, separation carried by spacing and flat surface tints instead of borders and shadows, one accent used sparingly, and a serif paired with a neutral sans for an unhurried editorial tone. It takes none of its identity. The accent is Juniper, a deep green-teal, chosen over the brief's sage (3.5:1 on the off-white) and dusty blue (4.1:1) because it is the only one of the three that clears 4.5:1 as body text on #FAF9F5 while still reading as a calm, non-clinical green; nothing in the palette sits near clay or terracotta. The typefaces are Newsreader and Geist, both OFL. Where Claude's surfaces are conversational and text-led, Rungs is numeral-led: figures are the largest thing on every screen, set in tabular Geist with the unit dropped to a small secondary-colour suffix, and every quantity in the app is restated as a **rung** — a 6px fully-rounded track with a proportional accent fill, gold-capped when the value is a record. The rung is the same primitive under a set row, on the weekly stats, on the volume list (where the track carries the target band and two hairline bounds) and on the rest timer, so one shape means “how much, against what” everywhere. The rung and the numeral treatment are what make the app recognisable at a glance.

Two further devices pull the list screens away from a column of text rows, which is the shape a Claude-derived layout falls into by default. Every exercise row, session header and exercise detail header leads with the **exercise icon** — the app's own anatomical figure, cropped to the muscle being trained — so the Library reads as a rack of body parts rather than a list of names, and nothing in the app needs a stock icon set or a photograph to say what a lift is. Every row that carries a quantity leads or ends with a rung: programme progress in Library, sets completed against sets planned in History and in the reports archive. Explore's programmes are cards, not rows, carrying a week structure as a row of marks and the programme's emphasis as a whole-figure silhouette with its priority muscles lit. The surfaces were deepened at the same time, because flat tints a twentieth of a step apart are a Claude-interface habit that only survives on a good panel. No screen in the app is a stack of undifferentiated rows on an undifferentiated ground, and nothing here is clay, terracotta, or set in an Anthropic typeface.

Icons are original 24×24 stroke geometry drawn for this design (1.5px, round caps and joins, currentColor) — no third-party icon set is used, so no icon licence applies. Type: Newsreader and Geist, SIL Open Font License 1.1, served from Google Fonts. All gym names, equipment lists, programme names and copy are invented. No logos, wordmarks, photographs or third-party UI are reproduced.

Exercise icons

Built from the same silhouette as the body map. Light theme.

The component

The icon is the app’s own figure, cropped. The body is one flat neutral – #B3AC95, a warm mid-tone from the palette, never near-black – and only the muscle the exercise trains carries the accent. The crop is whichever side and region shows that muscle: a squat is the lower body from the front, a Romanian deadlift the same crop from the back, a bench press the chest, a lateral raise the upper torso. Tiles are #DCD7C4 at radius 12, the same raised surface used under every other lead element, so a list of exercises reads as one column of rows rather than a strip of badges.

The set – nineteen exercises, eleven crops, both views

Front and back are the same figure; the view is picked per exercise by which side shows the target.

Library → Exercises · 44px lead

Construction

1 · silhouette layer, one flat neutral

2 · the target regions swapped to the accent

3 · same two layers, a different target and view

Every muscle is emitted as its own filled region over a separate silhouette layer, so shading, a secondary-muscle tone or a heat map can be added later by changing fills — nothing has to be redrawn. Fills are flat: no gradient, no stroke colour of its own, no shadow.

Exercise icons

Built from the same silhouette as the body map. Dark theme.

The component

The icon is the app’s own figure, cropped. The body is one flat neutral — #5A574D, a warm mid-tone from the palette, never near-black — and only the muscle the exercise trains carries the accent. The crop is whichever side and region shows that muscle: a squat is the lower body from the front, a Romanian deadlift the same crop from the back, a bench press the chest, a lateral raise the upper torso. Tiles are #3A3935 at radius 12, the same raised surface used under every other lead element, so a list of exercises reads as one column of rows rather than a strip of badges.

The set — nineteen exercises, eleven crops, both views

Front and back are the same figure; the view is picked per exercise by which side shows the target.
